

NEATO XV-11™ Robotic All-Floor Vacuum System

The new Neato XV-11 includes revolutionary robotics intelligence that assures the robot cleans the entire floor, carefully avoiding furniture, walls and other objects.

POWERFUL

Features an advanced, powerful vacuum system

- Thoroughly cleans carpets and floors
- Removes all kinds of dirt and debris
- Vacuums up tough pet hair

SIMPLE

Charge it, then let it go to work

- One-button operation
- Easily scheduled for daily cleanings
- Returns to its base and recharges itself

Bringing Next Generation Intelligence to Robotic Vacuum Cleaners

RPS Technology™

Laser-based Vision & Room Mapping

The Neato XV-11 is equipped with onboard Room Positioning System (RPS) technology, a revolutionary system developed by Neato Robotics that combines laser vision with mapping. With RPS technology, the robot uses laser light to see its surroundings and create accurate maps of areas to be cleaned — including furniture, objects and doorways. The robot constantly updates its map of the room, so if a new object is added into the room during a cleaning run, the robot will add it to the map.

Methodical Room Cleaning 1

RPS Technology enables the robot to clean your home methodically and completely. Using the map as a guide, the robot begins by outlining an area to clean, and then it fully cleans within the space in a back-and-forth pattern. RPS Technology assures that the robot's paths are straight and parallel, and that the robot covers the entire area.

Cleans Carefully 2 & 3

With RPS Technology, the robot cleans close to obstacles in its path, but goes around them carefully.

Designed to Reach Everywhere 4 & 5

The robot's low profile means it can clean under furniture while its square front allows it to reach into corners.

Easy Scheduling

The robot's LCD display and soft-button controls make scheduled cleaning simple to setup. A full week's cleaning schedule can be programmed with just a few button presses.

Cleans One Room At a Time 6

The Neato XV-11 vacuums one room completely before moving on to the next room. The robot's advanced artificial intelligence automatically recognizes room boundaries and doorways, meaning that it won't exit an open doorway unless it is finished cleaning the room. No extra setup is required.

Automatic Recharge and Resume

If the robot does not have enough power to complete cleaning of any area, it will automatically return to its base and recharge. Then it will resume cleaning where it left off until it has finished the job.

Cleans the Entire Area, Everytime

Your Neato vacuum knows what it has cleaned and where it still needs to clean because it is always checking and updating its map. It cleans larger rooms one segment at a time in order to reach all areas. In every case, you are assured that the robot cleans the entire area, everytime.

NEATO XV-11™ Robotic All-Floor Vacuum System

SPECIFICATIONS

Robot Dimensions	13 in. W x 12.5 in. L x 4 in. H
Package Dimensions	15.5 in. W x 15.5 in. L x 10 in. D
Package Weight	13 lb. (approx.)
Part Number	900-0001

Package Contents

- Neato XV-11 Vacuum Robot
- Charging Base
- Power Cable
- Boundary Markers
- User Guide
- Quick Start Card

Neato Robotics

Based in California's Silicon Valley, we are developing ingenious, hardworking robots that will do the dirty work for you – so you won't have to. In fact, you won't even have to be home.

Your Future Is Neat.™
